# Gone in 30 seconds

Until now, few chefs knew of a remarkable new material being developed for food prep labels. This new material sticks permanently to metal or plastic in dry conditions but dissolves away completely after 30 seconds in water!

Imagine how clean your containers could be...  
How much could it improve your food rotation and food cost, and how much time could it save searching for items in the chiller?

Simply stick it on a container and place in the dishwasher or under water.

Within 30 seconds there will be nothing left - no sticky, bacteria harbouring adhesive; no label bits to clog drains and dishwasher filters.

# Reduce wastage by improving food rotation

5cm prep labels (rolls of 250)

2.5cm day dots (rolls of 1000)

## Quality dispensers

These sturdy, robust dispensers have been built to stand the toughest kitchen. Their anti-slip feet sit tightly on any bench top and the quality construction of the injection-moulded roll holders enable rolls to be changed easily and quickly.
